Installation Steps

We recommend you to duplicate your live store on a staging/test site and try installation on it in advance.

Manual Installation:

Upload the content of the package to the 'app/code' subdirectory of your Magento store. Final directory structure should be like following:

<magento_root>`/app/code/MageAurigaIT/SmtpMailer/`

After this open a terminal window and switch to root directory of Magento installation. Run following command in your terminal to enable the module.

```
php bin/magento module:enable MageAurigaIT_SmtpMailer
```

Finally, run upgrade to finish the installation.

```
php bin/magento setup:upgrade
```
